

LOWER Your Energy Cost Up To 15%!* Up To 15%!!*

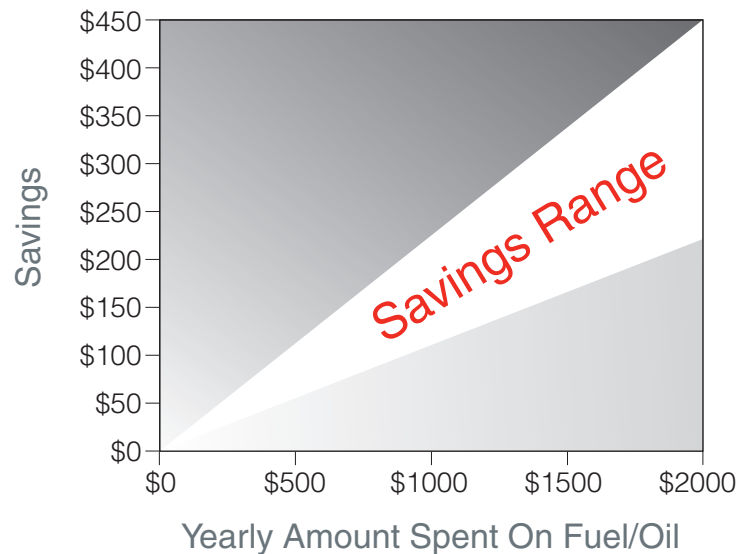

The Honeywell Aquatrol® Outdoor Temperature Compensator Runs Your System More Efficiently To Maximize Savings

The Aquatrol adjusts your boiler temperature to compensate for outdoor temperature changes, so your boiler will operate at a lower temperature during mild weather. The result is energy savings of up to 15%!

- **Improves Performance** — saves energy by operating your boiler at a lower temperature when conditions allow
- **Warm Weather Shutdown** — shuts the boiler off automatically during warmer periods
- **Domestic Hot Water Priority** — ensures an adequate supply of hot water, even for the last person in the shower
- **Fewer Service Calls** — the Aquatrol reduces system wear by operating your boiler more efficiently
- **Automatic System Circulator Exercising** — prevents the circulator from seizing up during the summer off cycle

Average Savings of 15%**

How Much Can You Save?

The Aquatrol quickly pays for itself. After that, the savings go straight to your wallet!
